**Research Summary**

My current research focuses on enhancing language models for social good, with a particular emphasis on *health domains* [1, 2, 4]. I am actively working on **post-training techniques**, such as *reinforcement learning from human feedback* [1, 6], and **synthetic data generation** [1, 7] to equip models with complex and reliable capabilities, such as *instruction following* and *personalization*. I have experience in evaluating and improving language models, particularly in their **dialogue abilities**, such as keeping *self-consistency* [5] and *safety* [6] or understanding *core semantic meaning* [7] and *speaker's emotion* [8] in conversation. Additionally, I have a strong interest in vision-language models, retrieval-augmented methods, and language agents. Totally, I have 9 papers along these directions including 7 first-authored papers and 7 peer-reviewed publications in top-tier AI conferences such as ACL, NAACL, NeurIPS, etc.
